

## In2net Knowledgebase

### **Allowing Ping Requests**

Enable "Normal firewall mode" on your Firewall settings within Parallels Power Panel  
(<https://your.hostname:4643/>)

In SSH, add the following two lines into your iptables:

```
-A VZ_INPUT -p icmp -m icmp --icmp-type any -j ACCEPT
```

```
-A VZ_OUTPUT -p icmp -m icmp --icmp-type any -j ACCEPT
```

Remember to save and restart iptables services in order for the changes to take full effect.

NOTE: if you make any setting changes through the Firewall setting within the Parallels Power Panel, this will wipe out all changes made in iptables.
