

## **In2net Knowledgebase**

### **How to change the Root password?**

1. Login into Parallels Power Panel

<https://your.server.hostname:4643/>

or

<https://your.ip.address:4643/>

2. Click Change Password

3. Enter a new password and confirm the password by typing it again.

To maintain security, it is recommended to occasionally change your password. The password should have 6 characters or more. Please do not choose passwords which are easy for others to guess. A strong and secure password should include a combination of letters (upper and lower case), numbers (0 9), and symbols (ie !@, #, \$, %, ^, &, \*). The server will support up to a 14 character password.

4. Click Change to save password. The system will indicate when the password has been changed successfully.
