How do I add a new domain to my account (new domain registration)?

This article is for clients who wish to register a new domain (ie. New Domain Registration).

*Note: This process only adds a domain to your hosting account, it does not automatically add the domain/website to your VPS Container

To add a new domain:

1. Click on the Upgrade Center tab.
2. Select Register New Domain.
3. You will be taken to the In2Net Domain Selection order form. Select the Register new radio.
4. Enter the desired domain name and click on the Continue button. The system will then perform a query to determine if the domain name requested is available for registration.
5. If the requested domain name is available, it will be displayed under the Domains available for registration section. Select the domain name you wish to register and continue by clicking on the Order Selected Domains button.
6. Click on the Order Now button to continue with your purchase request.
7. Select the preferred configuration settings and continue with purchase checkout and payment confirmation.
