How do I order more IP addresses?

To order more IP addresses for your VPS Hosting account:

1. Click on the Upgrade Center tab.
2. Select Buy Resources.
3. Enter the number of IP addresses you need for your account. For example, if you are currently on the BudgetVPS1010 plan, one IP address is already included with your hosting plan. If you need an additional IP address, you will enter "2" into the New Limit field.

4. Click on the Next button to complete with your upgrade request.

* Note: The new IP address will be adopt the billing term as your VPS hosting plan. For example, if you are currently subscribed to the BudgetVPS1010 plan, your additional IP addresses will be on a 12-month billing cycle.

** Note: There is a maximum number of IP addresses available for each VPS Hosting Plan. If you have already reached the maximum number of IP addresses supported by your hosting plan, you will need to consider upgrading your hosting plan before additional IP addresses can be purchased.
