

How do I backup my container onto my local computer?

To perform a Client Side backup:

1. Click on the System tab.
2. Select Backup and Restore.
3. Click on the Client-Side Backup and Restore tab.
4. Select the desired task.
 - a) Back up a user directory - you can select which user directory you wish to backup
 - b) Back up all the user's directories - this allows you to backup all user directories on your container
 - c) Back up a custom directory - you will need to enter the directories you wish to back up
 - d) Restore a directory from a backup stored on your computer - you will need to use the upload wizard to upload the backup file from your computer to the container
5. Once you have decided on the task, click on the Next button to continue.
6. If you are backing up directory(s), you will be prompt to save the backup file on your local computer. Select the Save File radio to complete the backup/download.
