

### **How do I restore my container from the server-side backup?**

To restore your container from the server side backup:

1. Click the System tab.
2. Select Backup and Restore.
3. Click on the Server-Side Backup and Restore tab. The list of all server-side backups will appear on the screen.
4. Select the backup to be restored by checking the box next to the backup file.
5. Click on the Restore button to complete the process.
6. Confirm the restore request.

Note: If you are restoring your container, all your current system data will be lost since it will be replaced with the backup. Your system will be restarted during the process of restoring.
