Where can I get a quick summy about my container and hosting service?

You can view the general settings of your VPS Hosting plan using the Subscriptions function on the My Account dashboard.

1. Click the My Account tab.
2. Select Subscriptions.
3. Click on the hosting plan you wish to view a quick summary of.
4. The Summary tab shows you the most general settings of your VPS hosting plan. Here you can adjust the subscription renewal settings, upgrade hosting plan or request subscription termination.
5. The Resources Usage tab shows you the current resource-usage values of your container.
6. The Configuration tab shows you the parameters of your hosting plan. Each parameter is described by Prepared limit (the resource limit included in Hosting Plan), Used value (current resource usage), and Cost for additional resource allocation (the price for additional resources per unit).
