How do I create a folder on my Container?

To create a folder:

1. Login to your Parallels Power Panel.
2. Click on the File Manager or Manage Files link.
3. Go to the directory where you wish to create the folder. For example, if you want to create a folder in the /var/www/html directory, click var and then www and finally html.
4. Click on the Create Folder icon.
4. Enter the folder name in the Folder Name field and click Submit when you are ready.

The new folder will be create in the designated directory.

If you need to edit the attributes of the folder (eg. set folder permissions), you can do so by:

1. Locate the file on your server using the File Manager.
2. Click on the Edit icon.
3. Make the necessary changes.
4. When you are ready, click on the Submit button to complete the request.
