

## **In2net Knowledgebase**

### **I want to create a text file on my Container.**

The Create File page on your Parallels Power Panel allows you to create simple text files directly inside the Container, without having to upload them from your local computer.

1. Open the File Manager page either via the File Manager link or the Manage File link.
2. Go to the directory where you wish to upload the file. For example, if you want to create the file in the /var/www/html/folder\_name directory, click var, then www, then html, and finally folder\_name.
3. Click on the Create File icon.
4. Enter the name and content of the file. When you are ready, click on the Create button.
