How do I add/remove applications from my container?

To add or remove applications from your container:

1. Login to your Parallels Power Panel.
2. Click on the Applications link on the side menu.
3. Click on the Manage button. It will open a screen where you can manage your applications.

To view applications already installed:

Applications already installed on your Container will be listed in the Installed/Scheduled Applications table.

To install new applications:

1. Select the preferred application(s) from the Available Applications table. Check the box next to the application you wish to install.
2. When you are ready, click on the >> button in the middle.
3. The applications will be added to the Installed/Scheduled Applications table.
4. When you are ready, click on the Submit button to start the installation process.

To remove applications:

1. Select the unwanted application(s) from the Installed/Scheduled Applications table. Check the box next to the application you wish to remove.
2. When you are ready, click on the << button in the middle.
3. The applications will be moved from the Installed/Scheduled Applications table to the Available Applications table.
4. When you are ready, click on the Submit button to start the deletion process.
