How do I install software packages onto my Container?

Your Parallels Power Panel allows you to install service packages to your Container via the Install New Packages wizard.

1. Login to your Parallels Power Panel.
2. Click on the Packages link.
3. The Package Management screen displays all software packages installed on your Container. To install new software packages click on the Install New Package icon.
4. The Available Packages table will be displayed. To install a package, select its checkbox and click on the Install icon.
