Add/Edit/Disable Input Chain

The Input chain examines the incoming packets. If there is a rule to process a packet, the latter is either let in (accept policy) or not (drop/reject policy). Otherwise, the packet is examined by the next rule. If, finally, there is not any rule to match, the default system policy is applied. The first rule applied to a packet is the first one on the list that forms a chain.

*Note: Make sure your firewall is in the Advanced Mode. If you need help activating or switching your firewall to the Advanced Mode, you can refer to the entry "Configuring Firewall in Advanced Mode".

Editing a Rule:

1. Select the Input tab.
2. To edit a rule, click its name in the Name column.
3. The Edit Rule page will open and you can make necessary modifications.
4. When you are finished, click the Submit button.

Adding a Rule:

1. Click on the New Rule button on the Input tab.
2. Enter the settings of your new rule.
3. When you are ready, click on the Submit button.

Enabling/Disabling a Rule:

1. Select the checkbox next to the rule you wish to enable/disable.
2. Click on the Enable or Disable button.

Reorganizing Rules:

To move a rule, click on the Up or Down button.
