

## In2net Knowledgebase

### **Add/Edit/Disable Output Chain**

The output chain regulates the outbound access. The default rules list is the same as in the Input Chain, the only difference being the output, instead of the input characteristic of the rules.

\*Note: Make sure your firewall is in the Advanced Mode. If you need help activating or switching your firewall to the Advanced Mode, you can refer to the entry "Configuring Firewall in Advanced Mode".

Editing a Rule:

1. Select the Output tab.
2. Click on the rule in the Name column.
3. The Edit Rule page will open and you can make necessary modifications.
4. When you are finished, click the Submit button.

Adding a New Rule:

1. Click on the New Rule button on the Output tab.
2. Enter the settings of your new rule.
3. When you are ready, click on the Submit button.

Enabling/Disabling a Rule:

1. Select the checkbox next to the rule you wish to enable/disable.
2. Click on the Enable or Disable button.

Reorganizing Rules:

To move a rule, click on the Up or Down button.
