## In2net Knowledgebase

## **Changing Linux Agent Configuration**

Option Name	Default Value	Description
ConfDir	/usr/sbin/r1soft/conf	Configuration directory path.
LogDir		Directory where the Backup Agent
ŭ		saves its log files.
		Sets the maximum size in bytes of
LogFileMaxBytes	33554432	an Server log file before it is rolled
		over and a new log file is created.
		LogFilesMaxFiles sets the
		maximum number of log files the
LogFileMaxFiles	10	Backup Agent will create before it
		starts deleting older log files. The
		value of zero will allow an
		unlimited number of files.
		The Backup Agent will listen for
		requests on this IP. Default is
BindTo	0.0.0.0	0.0.0.0, meaning the Backup
		Agent accepts connections on any
		IP address configured on your
		Linux server.
LocalPort	1167	TCP port the Backup Agent will
		listen on.

The Linux Backup Agent installer automatically sets default parameters for the configuration file located in: /usr/sbin/r1soft/conf/agent-config

After making changes to this file you need to restart the Agent daemon. To restart the Backup agent, use the following command:

/etc/init.d/cdp-agent restart

**Backup Agent Configuration Options** 

Run the following command to list all configuration options cat /usr/sbin/r1soft/conf/agent\_config or

less /usr/sbin/r1soft/conf/agent\_config
